

### General Description

This demonstration board utilizes the AL9910A high voltage PWM LED Buck controller providing a cost effective solution for offline high brightness LED applications. This user-friendly evaluation board provides users with quick connection to their different types LEDs string. The demonstration board can be modified to adjust the LED output current (2.5A) and the number of series connected LEDs that are driven.

### Key Features

- High output current, 2.5A
- ~90% efficiency
- DC input voltage range up to 80V
- Low BOM cost
- PWM Dimmable

### Applications

- Signage and decorative LED lighting
- High current DC-DC LED driver
- High intensity lamps
- Street lamps

### AL9910A EV2 Specifications

Parameter	Value
Input Voltage	40 to 80V <sub>DC</sub>
Output Power	50 – 60W
LED Current	2.5A (Adjustable)
LED Voltage	25V
Efficiency	~90%
Number of LEDs	(2) sets of 8 LEDs in parallel (Under Tested)
XY Dimension	3.00" x 3.25"
ROHS Compliance	Yes

### Evaluation Board

### Connection Instructions

Input Voltage: 40 to 80V<sub>DC</sub> (DC+, DC-)  
 LED Outputs: LED+ (Red), LED- (Black)

### Quick Start Guide

1. By default, the evaluation board is preset at 2.5A LED Current by R25, and R26. Non-Dimmable by R22, remove R22 to allow PWM Dimming input.
2. Ensure that the DC source is switched OFF or disconnected.
3. Connect the DC line wires of power supply to “Vin and GND” on the left side of the board.
4. Connect the anode wire of external LED string to LEDA output test point.
5. Connect the cathode wire of external LED string to LEDK output test point.
6. Turn on the main switch. LED string should light up.

### Bill of Material

#	Name	Quantity	Part number	Manufacturer	Description
1	U3	1	AL9910ASP-13	Diodes Inc	LED Driver
2	D1	1	SBR10U200P5-13	Diodes Inc	Super Barrier Rectifiers

### LIFE SUPPORT

Diodes Incorporated products are specifically not authorized for use as critical components in life support devices or systems without the express written approval of the Chief Executive Officer of Diodes Incorporated. As used herein:

A. Life support devices or systems are devices or systems which:

1. are intended to implant into the body, or
2. support or sustain life and whose failure to perform when properly used in accordance with instructions for use provided in the labeling can be reasonably expected to result in significant injury to the user.

B. A critical component is any component in a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or to affect its safety or effectiveness.

Customers represent that they have all necessary expertise in the safety and regulatory ramifications of their life support devices or systems, and acknowledge and agree that they are solely responsible for all legal, regulatory and safety-related requirements concerning their products and any use of Diodes Incorporated products in such safety-critical, life support devices or systems, notwithstanding any devices- or systems-related information or support that may be provided by Diodes Incorporated. Further, Customers must fully indemnify Diodes Incorporated and its representatives against any damages arising out of the use of Diodes Incorporated products in such safety-critical, life support devices or systems.
